

Stabbing Guide

LEOS's stabbing guide is used to align two joints of drill pipe, casing, or tubing. Consistent alignment increases the speed of connections and reduces related downtime. The stabbing guide also enhances pipe –handling safety for drilling-floor personnel by decreasing the risk of damage to the tubular connection threads, bail arms, or single –joint elevator, which could result in dropped object from the derrick.

The Stabbing guide consist of a stainless –steel collar and nylon that minimizes metal-on metal shock, which can cause major damage to the box or pin thread or to the seal surface.

Applications

- Tubulars from 4-1/2" to 20"
- Pin-up drill string connections
- Long and two-stages premium drill pipe connections

Features and Benefits

- The stabbing guide improves control while consistently aligning and safely guiding two pipe sections together, which reduces pin or box thread damage
- Large positive grip handles keep hands clear of stabbing connections, which provides an extra margin of safety while enabling personnel to control the connection.
- The latch mechanism has a simple design for ease of use when latching onto and disengaging from the pipe
